Non-contact Digital Laser Infrared Forehead Thermometer Temperature

- Why Do You Need It?
- 1.No-touch technology guarantees reliable readings without spreading germs! Test multiple family members at once without worry.
- 2.Color alarm instantly alerts you if your child is running a normal body temperature, mild fever, or high fever! No more guesswork!
- 3.Check the temperature of rooms and household objects! Test your baby's bathwater, formula, or food to make sure it's safe.

One Second Temperature Measurement

How Does It Work?

- Step 1
- Select Body or Object mode, hold the infrared sensor above your subject, and hold down the button.
- Step 2
- In less than a second, the digital display will bring up the temperature reading, accurate to 0.4°F (0.2°C) with a matching color code.
- Step 3
- Wait and repeat. Store up to 64 temperature readings so you can track the progress of your child's fever.
- Traditional contact thermometers can carry bacteria for weeks, which means you could accidentally give your child a bug while checking for one! Fever Patrol never touches your child, so it's 100% safe.

**Non contact
infrared thermometer**

measuring range: **32°C~42.9°C**

0.5 second fast measurement

High definition backlight display

Beep measurement tips

Features

1. Fast temperature measurement: measurement time <1 second.
2. Dual-mode temperature measurement: It can measure human body temperature / material temperature / water temperature / ambient temperature.
3. Temperature alarm: The user can freely set the alarm temperature according to his own situation.
4. Unit conversion: Celsius and Fahrenheit can be converted between different countries and regions
5. Storage data: Store 32 sets of measurement data, which is convenient for individual and multi-person analysis and comparison.
6. Large-screen display: Large-screen LCD display, white backlight, can be clearly displayed under any light.
7. Easy-to-use power-saving: One-button measurement, simple and convenient operation; automatic power-saving shutdown for 15 seconds without operation
8. Ultra-long life: Install 2 AA batteries, can be used more than 100,000 times, and the service life of the product is > 3 million times.
9. Large-screen display: Large-screen LCD display, white backlight, can clearly display the measured value under any light.
10. Infrared measurement: It only measures the infrared radiation signal emitted by the human body, and does not touch the human skin, which is harmless to the human body.

Small Body, Easy Hold
